Projects

Aniname

Aniname is a website made with JavaScript, HTML, and a CSS framework we used Bulma. On this site you can search anime, view top anime and their ratings, and you are able to add them to your own list.

GoodPicks

GoodPicks is a social media site that uses the Spotify API to get artists pictures, album covers and songs. The HTML structure was created with handlebars, CSS was Tailwind, and JavaScript was vanilla JavaScript. With this site users are able to create an account or delete an account, they are able to sign in, and they are able to post their reviews on songs. If a user rates a song 5 stars it will get added to their profile which other users can view. It will be placed on their top songs and artists tab.

FitSync Pro

FitSync Pro is a fitness website created with React, MongoDB, Mongoose, and Material UI. The Gemini API is being used to create workouts for users using AI based on their age, fitness level, and goals.
